

# Lab Safety Health Information

## Fort Worth Country Day

While we consider our science classes and labs to be very safe, we would like to know if your child has any health-related conditions that might be relevant to those environments. Such conditions could include asthma, allergies, and neurological conditions such as epilepsy (especially where the condition might be exacerbated by loud noises or bright light.) Please take this opportunity to let us know about any conditions that you feel are relevant. **Even if no such conditions exist, please sign and have your child return this form.** Thank you for your help.

---

Relevant health conditions you may want teachers to know about. (If none, please write "none.")
